Leader key: `,` (comma)

Neovim

Find / Search

Shortcut	Description
`,ff`	Find files (from nvim-tree dir if focused)
`,fg`	Live grep (from nvim-tree dir if focused)
`,fb`	Find buffers
`,fh`	Find help tags
`,fe`	Find LSP references
`,fc`	Find string under cursor
`,fr`	Find recent files
`,fs`	Find string in cwd
`,ft`	Find TODOs

LSP / Code Intelligence

Shortcut	Description
`gd`	Go to definition
`gD`	Go to definition (LSP)
`gR`	Show LSP references (Telescope)
`gi`	Show LSP implementations
`gt`	Show LSP type definitions
`K`	Show hover documentation
`,ca`	Code actions
`,rN`	Smart rename
`,rs`	Restart LSP
`,D`	Show buffer diagnostics
`,h`	Show line diagnostics
`,fo`	Open diagnostic float

Git

Shortcut	Description
`,gb`	Blame line
`,gB`	Blame file
`,gt`	Toggle line blame
`,gp`	Preview hunk
`,gr`	Reset hunk
`]h`	Next hunk
`[h`	Previous hunk

Merge Conflicts (in diff view)

Shortcut	Description
`,ml`	Get from LOCAL (ours)
`,mr`	Get from REMOTE (theirs)
`,mb`	Get from BASE
`]c`	Next conflict
`[c`	Previous conflict

File Explorer (nvim-tree)

Shortcut	Description
`,ee`	Toggle file explorer
`,ef`	Reveal current file in explorer
`,ec`	Collapse file explorer
`,er`	Refresh file explorer

Buffers

Shortcut	Description
`,bn`	Next buffer
`,bp`	Previous buffer
`,bd`	Close current buffer
`,bD`	Close all other buffers
`,bl`	List buffers
`,bs`	Search buffers (Telescope)

Windows / Splits

Shortcut	Description
`,sv`	Split vertically
`,sh`	Split horizontally
`,sV`	Split vertically + terminal
`,ssv`	Split + open vimwiki link
`,se`	Equalize splits
`,sx`	Close current split
`Ctrl+h/j/k/l`	Navigate between windows
`Shift+Esc`	Cycle to next window

Tabs

Shortcut	Description
`,to`	Open new tab
`,tx`	Close current tab
`,tn`	Next tab
`,tp`	Previous tab
`,tf`	Open current buffer in new tab

Testing (Neotest)

Shortcut	Description
`,rt`	Run make test
`,rn`	Run nearest test
`,rd`	Debug nearest test
`,rf`	Run file tests
`,ro`	Toggle test output panel
`,ypt`	Yank pytest command for current test

Debugging (DAP)

Shortcut	Description
`,db`	Toggle breakpoint
`,dc`	Continue/Start debugging
`,di`	Step into
`,do`	Step over
`,dO`	Step out
`,dt`	Terminate debugging
`,du`	Toggle debug UI

Markdown

Shortcut	Description
`,rmp`	Run markdown preview
`,rmt`	Toggle markdown preview
`,rms`	Stop markdown preview
`,rmo`	Convert to PDF and open
`,rmd`	Convert to PDF (debug)

Navigation / Jumping

Shortcut	Description
`Space`	Toggle fold
`,.n`	Next quickfix item
`,.p`	Previous quickfix item
`]d`	Next diagnostic (any severity)
`[d`	Previous diagnostic (any severity)
`,.t`	Next ERROR-level diagnostic
`,.h`	Previous ERROR-level diagnostic
`,.m`	Jump to enclosing method
`,.c`	Jump to enclosing class
`,.o`	Open file in brackets

Options / Toggles

Shortcut	Description
`,ocs`	Select colorscheme
`,oace`	Enable auto-complete
`,oacd`	Disable auto-complete
`,ost`	Set textwidth to 160
`,osp`	Enable spell checking
`,osP`	Disable spell checking
`,orw`	Reset windows and equalize

Editing

Shortcut	Description
`s`	Insert one character
`S`	Append one character
`,nh`	Clear search highlights
`,ss`	Save all files
`,st`	Set textwidth + wrap paragraph

Shortcut	Description
`,ya`	Yank entire file
`Ctrl+l`	Insert current date
`Ctrl+r` (visual)	Replace selection
`iz`	Text object: inside fold

Vimwiki

Shortcut	Description
`gn<space>`	Toggle list item
`gl<space>`	Toggle list item
`gltXY`	Create X by Y table
`,if`	Insert current filename
`,ii`	Insert vimwiki header
`,il`	Generate links from pattern

Telescope (in picker)

Shortcut	Description
`Ctrl+j`	Next result
`Ctrl+k`	Previous result
`Ctrl+q`	Send selected to quickfix
`Ctrl+Shift+q`	Send all to quickfix
`Ctrl+d`	Delete buffer (in buffer picker)
`d`	Delete buffer (normal mode)

Terminal

Shortcut	Description
`Ctrl+\``	Switch to terminal buffer	|Shift+Esc`	Exit terminal to next window

Tmux

Prefix: `Ctrl+b`

Shortcut	Description
`!`	Split horizontal
`–`	Split vertical
`r`	Reload config
`h/j/k/l`	Resize pane
`m`	Maximize/restore pane
`v` (copy mode)	Begin selection
`y` (copy mode)	Copy selection

Shell (ZSH)

Git Aliases

Alias	Command
`gs`	git status
`ga`	git add
`gp`	git push

Alias	Command
gpo	git push origin
gplo	git pull origin
gpra	git pull –rebase –autostash
gb	git branch
gc	git commit
gd	git diff
gco	git checkout
gl	git log
glo	git log –pretty="oneline"
glol	git log –graph –oneline –decorate
gr	git remote
grs	git remote show
gtd	git tag –delete
gtdr	git tag –delete origin
gmt	git mergetool

Git Functions

Function	Description
gvwcp	Add all, commit with date, push (vimwiki)
cpr <PR#>	Checkout PR in new worktree
dpr	Delete current worktree, return to main

General Aliases

Alias	Command
reload	source ~/.config/zsh/.zshrc
editconfig	nvim ~/.config/
editrc	nvim ~/.config/zsh/.zshrc
nvimconfig	nvim ~/.config/nvim
sync	Pull latest config and vimwiki
ll	ls -l
br	Brew update/upgrade/doctor/cleanup
pv	source venv/bin/activate
createVenv	python3 -m venv venv
ta	tmux attach-session -t
tn	tmux new-session -t
saveWiki	Save vimwiki with date commit
oD	Open newest file in Downloads

Karabiner

- External Apple keyboard uses Dvorak layout remapping
- Built-in keyboard uses standard layout
